VERBATIM REPORT OF PROCEEDINGS  
BEFORE THE HONORABLE JAMES L. ROBART  
UNITED STATES DISTRICT JUDGE

---

**APPEARANCES:**

**For Microsoft:           ARTHUR HARRIGAN**

**For Motorola:           JESSE JENNER**

**Reported by:           NANCY L. BAUER, CCR, RPR  
Federal Court Reporter  
700 Stewart Street, Suite 17205  
Seattle, WA 98101  
(206) 370-8506  
nancy\_bauer@wawd.uscourts.gov**

1           THE COURT: Go ahead. Obviously, it influences the  
2 court's analysis.

3           MR. JENNER: Right. I think it's good background. I  
4 think, as a generality, what we're talking about here are  
5 matters that have arisen over the last, oh, maybe 20 years in  
6 the nature of standardization of products and processes.

7           It has become important for manufacturers and service  
8 providers to be able to provide their products and services  
9 consistently so that consumers can have various products  
10 interact with each other and not find they've taken something  
11 home that won't work with somebody else's product. Just one  
12 example of that would be digital video disks.

13           Standards are needed for the disks and for the players so  
14 that if a consumer buys a DVD and puts it in a particular  
15 player, it will work in that player, just as in other  
16 players, and so that all these devices will be interactive.  
17 And the way you get there is by competent engineers and  
18 scientists getting together and developing a set of  
19 technological requirements for these kinds of products so  
20 that if everybody conforms to the requirements that is  
21 practiced as the standard, then all of their products will be  
22 interactive, the consumer will benefit by being able to go to  
23 any source for the product, and there will be a general  
24 benefit for this.

25           What we're dealing with here are two of these standards.

1 One of these standards is the so-called 802.11 standard that  
2 we will refer to, and that's basically a wireless  
3 communications standard that's promulgated by representatives  
4 coming together at the IEEE, the Institute of Electrical and  
5 Electronics Engineers. These enable things like laptop  
6 computers and cell phones and those kind of devices to  
7 communicate wirelessly; for example, when we out-of-towners  
8 go to our favorite Starbucks, we can connect through the  
9 wireless connections, and we know, because of the  
10 standardization, our devices will talk to other people's  
11 devices.

12 The other standard is the so-called H.264 standard, which  
13 is promulgated by the International Telecommunications Union,  
14 or ITU as we refer to it. It is a video encoding standard  
15 that enables users to watch the same video on whatever device  
16 that they may happen to have, be it the handheld or a laptop,  
17 that has become compatible with the H.264 standard. So these  
18 are standards that have been developed over the years, and  
19 they're are the ones that we're playing with here.

20 Companies who developed proprietary technology are able to  
21 get patents on portions of what is used in the standard.  
22 This could create problems if people have patents on the  
23 standard and they don't make them available on so-called  
24 reasonable and nondiscriminatory terms, R-A-N-D, or RAND.  
25 You'll hear a lot about RAND.

1        So these standards organizations, or SDOs, have variable  
2 requirements, they do it in different ways. But, in essence,  
3 they require some sort of an assurance from members of the  
4 organization that if they get a patent on a portion of the  
5 standard, they will either license it free, if that's what  
6 their intention is, or they will license it on RAND terms.

7        All the standards have different languages. To the extent  
8 that we're talking about a breach of contract action here,  
9 which we are, as I will come to in a moment, it's important  
10 to look at the actual language in order to understand what it  
11 is.

12        So letters of assurances were required, they were  
13 provided, in this instance by Motorola for Motorola's  
14 products that are consistent with the requirements of the  
15 standards body.

16        So I submit, Your Honor, and I think your question goes to  
17 this, in part, what the actual obligation is and how it is  
18 satisfied varies from one standards organization to another.  
19 We have to look at what it is here that was undertaken in  
20 order to understand what we're dealing with.

21        So in order to do that, I would like to show Your Honor  
22 relevant language, which I think you'll see deviates from  
23 what we submit Microsoft has been arguing about. If Your  
24 Honor would take the little slide book that I gave you out.  
25 The two that are relevant to understanding what the

1 obligations are, are Slide 3, which is the policy excerpt for  
2 the IEEE having to do with 802.11, and Slide 4, which are  
3 from the ITU's guidelines that have to do here with H.264.

4 And just to give you a preview: To the extent that there  
5 is or has been a suggestion that Motorola was required to  
6 offer a precise RAND rate and royalty base, the absolute  
7 exact prevailing RAND rate, that is not what either of these  
8 bodies call for.

9 If you look at Slide 3, the first sentence states, "Not  
10 that a precise RAND rate is going to be offered from the  
11 outset," which I submit to Your Honor is impossible to figure  
12 out. It varies, and every situation is going to be  
13 different. But it says, "A license will be made available to  
14 an unrestricted number of applicants on RAND terms." "A  
15 license will be made available." And then it goes on at the  
16 bottom, and it says, "The IEEE is not responsible for  
17 determining whether any of the terms or conditions are, in  
18 fact, RAND terms and conditions."

19 And it's implicit, I submit, in that that it is up to the  
20 parties to come to an agreement, if they can, on whether or  
21 not the actual, final license terms are RAND terms. So you  
22 have to get there, and the only other way you can possibly  
23 get there is by negotiating.

24 This is even more explicit in Slide 4, because the ITU, in  
25 Slide 4, calls this right out. In Slide 4, in the lower box,

1 No. 2: "The requirement is that the patent holder is  
2 prepared to grant a license to applicants on RAND terms."

3 Not again that you must come forward, having somehow  
4 figured out what the precise correct RAND term is, but that  
5 you're prepared to grant a license. And this union, ITU,  
6 tells you how to get there, because it goes on to say in the  
7 second sentence, "Negotiations are left to the parties'  
8 concern and are performed outside the ITU." And the Annex  
9 No. 1 at the top says the same thing: "The detailed  
10 arrangements arising from patents, licensing royalties, et  
11 cetera, are left to the parties' concerns, as these  
12 arrangements might differ from case to case."

13 So the ITU makes it absolutely explicit that the way you  
14 get to the license that is to be provided is by negotiating.  
15 Everybody knows that. And just to show you a couple of  
16 examples, I've attached, at Tab 5, a couple of excerpts from  
17 the American Bar Associations' committee on standardization.  
18 And it says, in the first box at page 49, in the yellow  
19 highlighting, "It's reasonable to require that licenses be  
20 granted only upon request by a potential licensee."

21 And by the way, Microsoft never even requested a license.  
22 To this day, they haven't said they'll take one. But in any  
23 event, it says, "Upon the conclusion of bilateral  
24 negotiations." So the ADA's committee on standardization  
25 also recognizes that the way you get there, consistent with

1 common sense, is by negotiations.

2 And finally, at Slide 7, we have brought in as a learned  
3 publication, it didn't appear in a law review, it was  
4 delivered orally, slides by Ms. Marasco, who is Microsoft's  
5 own general manager for standard strategy. In the lower box,  
6 she, too, acknowledges that, "A prospective implementer that  
7 has requested a license will negotiate on a private bilateral  
8 basis with the patent owner to determine whether they can  
9 arrive at a mutually acceptable agreement on RAND terms." So  
10 Microsoft's own general manager knows it.

11 The only way you can possibly deal with what are  
12 appropriate RAND terms in any given setting is by  
13 negotiating, and that didn't happen here.

14 Why does that even make sense? It makes sense because we  
15 don't know what a RAND rate is in any given situation, but  
16 the actual RAND rate at the end of the day may be a high rate  
17 for a high user of technology that had nothing to give back  
18 in a cross-license. It may be a lower rate, where the user  
19 is a moderate user and has a lot of its own technology to  
20 give back as a result of the negotiations.

21 The only way you can get there is by engaging, and if you  
22 never engage, you never get the process going, which we  
23 submit, Your Honor, is noncompliance with the standards.

24 Why does that matter? Because even though Microsoft says  
25 at page 2 of its brief that it was under no obligation to

1 negotiate, the fact of the matter is, you can see from the  
2 standard that they were under an obligation to negotiate.

3 The contract is the entirety of the standards bodies rules  
4 that govern this. The ITU makes it plain explicit that the  
5 parties are to negotiate. And Microsoft, if it wants to  
6 claim to be a third-party beneficiary, which it does, is  
7 obligated to comply with the very contract of which it claims  
8 to be the third-party beneficiary. And this is true of these  
9 standards, it's true of all standards. This is the way  
10 people deal with them. They negotiate.

11 So you have a policy, you have requirements for  
12 negotiation, you have the common sense, which the *Iqbal* case  
13 I will come to in a while calls for, in which we are all  
14 called upon to apply our common sense to whether or not a  
15 pleading states a plausible cause of action. Common sense  
16 even says you have to engage in negotiation.

17 Microsoft, in its brief, says we're not dealers at a rug  
18 bazaar. I don't like to think of it as a rug bazaar. I  
19 guess that's okay. But think of it as a car situation where  
20 you walk into somebody down the street who says, "I've got a  
21 car I will sell you. It's a Prius. It's pretty good on fuel  
22 economy. I'll give it to you for \$100,000." You can walk  
23 away, if you choose to, in which case we don't know what the  
24 right is for a Prius. Or you can engage and say, "That's  
25 ridiculous. Your Prius isn't worth \$100,000. I'll give you

1   \$30,000 for it." And then you get into an engagement, and  
2   you might get comparable to a RAND term. You might get the  
3   actual price of the car and reach an agreement.

4       On the other hand, in the RAND negotiations setting it is  
5   possible, you will get the impasse, and the court may have to  
6   intervene. You've seen cases where courts were prepared to  
7   intervene in setting a RAND rate, but it never came to that,  
8   it was always settled.

9       The point is, you don't get to that situation unless you  
10   engage and negotiate the way the standards require, and  
11   verbatim in the standards. It's part of the contract. And  
12   that's why I say, as a matter of understanding the legal  
13   basis for -- under which Microsoft needs to negotiate, I  
14   submit, Your Honor, it is in the agreements themselves as a  
15   whole, as recognized by people like the ABA and Microsoft's  
16   own standards manager. So that is the basis on which we say  
17   that there has to be a negotiation.

18       Now, here, Microsoft simply never engaged and never  
19   negotiated. This is unlike all the other authorities on  
20   which Microsoft relies in its briefs, and that's why they're  
21   distinguishable. The *Wi-Lan* case, the *RIM* case, these cases  
22   that you saw in Microsoft's briefs all involved negotiations  
23   that came to an impasse. Well, if negotiations came to an  
24   impasse, then I'd submit to Your Honor that it's appropriate  
25   at impasse for someone to consider invoking the court, but

1 that should only be after the negotiations have failed and  
2 the parties can no longer make any progress.

3 Why? Because no court has ever set a RAND rate. I don't  
4 mean to suggest for a second that the court can't do that.  
5 The court can do that. But it is a novel process, there's no  
6 meaningful guidance for it, it is basically setting sail on  
7 an uncharted sea. The only body that has ever tried to  
8 actually determine a RAND rate was the Federal Trade  
9 Commission in part of its RAND investigation, where it spent  
10 55 months, 55 months conducting the entirety of the  
11 proceedings that resulted partially in a so-called RAND rate.

12 This is the multipage copy of 80,000 words worth of what  
13 the Federal Trade Commission came up with, and then it was  
14 duly thrown out by the D.C. circuit.

15 So I submit to Your Honor that while the court certainly  
16 can be the pioneer that goes off and tries to determine what  
17 it is that ought to be considered in setting a RAND rate,  
18 that should only be done on a record of bilateral  
19 negotiations, the way that happened in other every other case  
20 that the parties have referred to, and you shouldn't be  
21 required by Microsoft to put yourself in the position of a  
22 rate-making proceeding, an agency, essentially, conducting a  
23 rate-making proceeding that will go on for a considerable  
24 period of time on a basis which we've not yet determined.

25 I know Microsoft says it's an easy thing to do,

1 straightforward. They've proposed a short schedule for doing  
2 it. I don't know how anybody can suggest that. We're going  
3 to have to consider unknown factors. Some of the factors  
4 could be, if we're going to value Motorola's H.264 portfolio,  
5 who else has an H.264 portfolio? How many portfolios are  
6 there? How valuable is each one? How can you assess that  
7 without looking at the patents in each portfolio and figuring  
8 out what they're worth in order to figure out proportionally  
9 who gets what share of some proposed total royalty package,  
10 if that's the way you're going to approach it? I don't know  
11 how you're going to approach it.

12 But what I'm suggesting is that if you have to go through  
13 a process in which, among other things, you have to value the  
14 standards essential patent portfolios, that is much more than  
15 a single patent infringement proceeding; whereas my patent or  
16 my five patents against the products that are said to  
17 infringe the way courts have done thousands of times in the  
18 past, you're asking to set forth, as I said, on uncharted  
19 sea, and I submit if there isn't a legitimate basis for it in  
20 the contract, you shouldn't do it.

21 And I guess I should also emphasize -- I don't want to  
22 lose sight of this fact -- that you're being asked to do it  
23 for an unclear purpose. At the end of the day, you may go  
24 through the FTC 55-month-style proceeding to set a RAND rate  
25 that Microsoft has studiously avoided saying that they're

C E R T I F I C A T E

I, Nancy L. Bauer, CCR, RPR, Court Reporter for the United States District Court in the Western District of Washington at Seattle, do hereby certify that I was present in court during the foregoing matter and reported said proceedings stenographically.

I further certify that thereafter, I have caused said stenographic notes to be transcribed under my direction and that the foregoing pages are a true and accurate transcription to the best of my ability.

Dated this 23rd day of May 2011.

/S/ Nancy L. Bauer
